

Eco-Geotube Technical Specifications

parameter	specifications
material	high-strength polypropylene geotextile with uv stabilization
permeability	optimized for sludge dewatering and sediment containment applications
tensile strength	warp: 1245 lbs/in, weft: 1300 lbs/in (minimum values)
standard width	2-6 meters (custom widths available)
standard length	50-200 meters (project-specific lengths possible)
filtration	controlled opening size for effective solids retention
environmental	designed for ecological restoration projects including wetland creation
installation	includes integrated filling ports with reinforced attachment points
